1. Purpose and Scope

Trading Parties may transact with the CMA using one of two interfaces:

- 1. the Low Volume Interface (LVI)
 - a. this interface is web based and available to all Trading Parties
 - b. it is unsuitable for Trading Parties with large data volumes to transact and / or those seeking a greater degree of process automation
 - c. for further information on the LVI please refer to the [CMA LVI User Manual]

2. the High-Volume Interface (HVI)

- a. this interface is available to all Trading Parties
- b. it is suitable for transacting large data volumes with the CMA
- c. all transactions are available via this interface

The Data Transaction Catalogue (DTC) provides:

- a logical definition of the data items transacted between Trading Parties and the CMA via the LVI and the HVI
- a logical definition of the Data Transactions used to communicate information between Trading Parties and the CMA using the HVI
- 3. technical specifications for each of the CMA interfaces
- 4. technical specifications of the data items and transactions

This document does not define or provide transactions between Trading Parties.

1.1 Annexes

Items 3 and 4 above are Annexes as follows:

- Annex A: HVI
 - Transport & security
 - Web Services Communication Protocol
 - XML Schema for Transactions & Data Items
 - Web Services WSDL Description
 - Data Conventions for both HVI and LVI.

2. Data Items

2.1 Overview

Data items are defined using the following parameters:

| Data Item Number: | Uniquely identifies the data item in this document | |
|---|---|--|
| Data Item Name: | Descriptive name of the data item | |
| Defines data type specification (e.g. 7boolean, string, decimal). For part of the part of | | |
| Member of unique serial set: | [yes/no] When [yes] the data in this data item is unique and identifies an item (e.g. a meter, a Supply Point) via a 1:1 relationship | |
| Member of Valid Set: | [yes/no] When [yes] this data item may only be populated with data from a defined set. Note that this may include data items without an explicitly defined valid set: for example, a SPID belongs to an implicit valid set, the list of SPIDs held by the CMA | |
| Data Group: | Groups items together for ease of reference. See key 2 for further details | |
| Correction Method: | Specifies the appropriate data correction method: Error Rectification or Retrospective Amendment where appropriate | |
| Data Owner: | The Trading Party responsible for submitting this data item to the CMA. Not all data items belong to an owner and some data items may have more than one owner. See key 1 below for data item owner code | |
| Description: | Describes purpose for correct usage of this item | |

Key 1

| Trading Parties | Description |
|-----------------|------------------------------|
| CMA | Central Market Agency |
| SW | Scottish Water |
| LP | Licensed Provider |
| LP(o) | Licensed Provider (outgoing) |
| LP(i) | Licensed Provider (incoming) |

Key 2

| Data Group | Series | Description |
|------------------------|--------|---|
| System | D1000 | Data for system operations and transactions |
| SPID (Core) | D2000 | Data applicable to both Supply Points where Supply Points exists as pairs (i.e. are related by the core number) |
| SPID (Category) | D2000 | Data applicable to individual Supply Points |
| SPID (Service Element) | D2000 | Data applicable to Service Elements of each Supply Point |
| Meter | D3000 | Data pertaining to each meter |
| Market | D4000 | Data pertaining to Supply Points that are not parameters of Supply Points |
| Address | D5000 | Data group comprising of address (location information) data items |
| Trade Effluent | D6000 | Data pertaining to Trade Effluent Discharge Points |

2.2 LVI View of Data Items

| Market Participant | LVI view of Data Items |
|--------------------|------------------------|

| Licensed Providers (LPs) | LP LVI users have access to see all of the Data Items listed in Section 2.3. |

5. Supply Point Identifier (SPID)

A SPID is composed of 3 parts concatenated into a single, unique, 12 digit number. Figure 1 below illustrates the component parts:

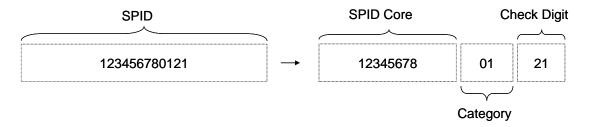

Figure 1 - SPID

where each part of a SPID is as follows:

- SPID Core: This is the serial number generated sequentially upon adding a Supply Point to the Supply Point Register and identifies a Supply Point without making a distinction between Water or Sewerage Services – the SPID Core is thus not unique
 - a. SPID Cores created prior to 1st April 2008 are pre-fixed [1]. Thus the very first SPID Core number created is [10000001]
 - b. SPID Cores created post 1st April 2008 are pre-fixed [2] or greater
- 2. Category: This identifies the SPID as:
 - a. [01] Water Service
 - b. [02] Sewerage Service
 - c. There are only the two categories as above
 - d. The concatenation of SPID Core and Category to form, in the example above, SPID [1234567801] creates a unique identifier. In this example, the SPID is for Water Services and uniquely identifies the Water Service Supply Point of that number
- Check Digit: The check digit enables error detection and is an intrinsic part of the SPID. The check digit must always be used. SPIDs without check digits are less than 12 digits in length and are not considered valid

5.1 Verifying the Check Digit

It is recommended that all Trading Parties verify the validity of a SPID by calculating the checksum for the SPID upon receipt and transmission of data. Check digit generation is based on a modulus 13 (MOD13) algorithm. The example algorithm below can be used to perform the checksum calculation:

5.2 Business Day Hours

The Market Code defines the hours during which the Central Market Agency accepts Transactions for processing. Note that:

- Transactions will be accepted by Central Systems at any time it is operational
- Transactions received after the closing business hour of a Business Day will, however, be deemed to have been received on the next business day
- Central Systems will not unnecessarily delay the processing of a Transaction received after the closing business hours of a Business Day

For example, where the required date for a Transaction to be received by the CMA is Day 1 and that Transaction is received after the closing business hours of Day 1 but before midnight, that Transaction will be deemed by Central Systems to have been received at the opening business hours of Day 2.
